

Watson's Acid Base Worksheet page 3: Renal Tubular Acidosis Summary

Type	Location	Pathophysiology	NAGMA	UAG	Ur pH	FeHCO ₃	Serum K	Some Etiologies
I	Distal tubule	↓ distal H+ secretion	Severe HCO ₃ =9-12	+	>5.3	<3%	↓	SLE, Sjogren's Hepatitis Nephrocalcinosis Amphotericin
II	Proximal	↓ proximal HCO ₃ reabsorption	Moderate HCO ₃ = 12-16	±	variable (>5.3 after HCO ₃ load)	>15%	↓ or normal	Fanconi's Amyloid Myeloma Acetozolamide + Glucosuria
IV	Hypoaldo state	↓ Aldo = ↑K = ↓NH ₃ = ↓Ur acid carrying	Mild HCO ₃ =17-20	+	<5.3	<3%	↑↑	DM ACEI, ARBs Heparin Adrenal disorders TMP-SMX Sickle cell disease Calcineurin inhibitors K-sparing diuretics

**Clinical lab findings in Proximal RTA also include:
low phosphorus, glucosuria
